

4-Week Online Bootcamp

AI-Assisted Mobile UI Test Automation using Claude

Starts June 7, 2026 · Live online · 100 seats

```
await driver  
  .$('~loginE  
  .click();  
// Claude: w  
// the next
```

The problem

Mobile automation is still slow.

Writing page objects from scratch for every screen

Debugging flaky tests across iOS + Android

Framework refactors that eat entire sprints

What if an AI pair-programmed it with you?

The shift

Claude + Appium = a different workflow.

THE OLD WAY

Write locators manually

Refactors take a whole sprint

Flaky test? Add more waits

WITH CLAUDE CODE

✨ Generate POM from recording

🔧 Refactor across files in one pass

🎯 Claude finds the real root cause

Not a demo. A workflow you'll use daily.

What you'll build

By Week 4, you'll have:

- ✓ An end-to-end Appium framework (iOS + Android, POM, data-driven)
- ✓ A CI/CD pipeline on GitHub Actions + BrowserStack
- ✓ 10+ real test scenarios — auth, CRUD, navigation, error handling
- ✓ AI-assisted workflows you can bring to your team on Monday
- ✓ A certificate + starter repo you actually keep

When, how much, who's teaching.

Dates: 4 Sundays — June 7, 14, 21, 28 (2026)

Time: 2:00 – 6:00 PM SGT

Format: Online, live, hands-on

Seats: Limited to 100

Price: SGD 100 (~USD 75)
